SEM VII BE Project Post Proposal Review Rubric

Proposal submitted | Problem understanding and basic working expected | Maximum marks 30

Project title	Advanced Safe Load Indicators	**Team number**	18
Student names and roll numbers	Mohammad Salah Chogle :- 41 Ali Kalsekar :- 53 Aayush Kadam :- 51	**Guide**	Gopalkrishnan N

Evaluator instruction Tick the single descriptor that best matches the evidence and enter its score. Award 0 only when no relevant evidence is presented. Us whole-number scores only.

No	Criterion	Excellent 5	Good 4	Satisfactory 3	Limited 2	Weak 1	Score
1	**Problem understanding and need**	Clearly explains the problem, users, context, impact and key constraints; responses show strong understanding.	Explains the problem, users and most constraints clearly; minor details are missing.	Understands the general problem, but user need, impact or constraints are partly vague.	Problem explanation is incomplete or confused; important assumptions are unsupported.	Cannot clearly explain the problem or the proposal does not match the stated need.	5 / 5
2	**Existing solutions and identified gap**	Compares relevant research, products or methods using evidence and identifies a precise, justified gap.	Reviews relevant alternatives and identifies a credible gap, with only minor omissions.	Presents a basic review; the gap is stated but comparison or evidence is limited.	Lists a few solutions without meaningful comparison; the gap is unclear.	No relevant study is evident, or no problem gap is identified.	4 / 5
3	**Objectives scope and success criteria**	Objectives are specific and measurable; scope, boundaries, requirements and success criteria are explicit.	Objectives and scope are clear; most requirements and success criteria are defined.	Objectives are generally relevant but broad; scope or success measures need refinement.	Objectives are partly defined, overlap or do not fully address the problem.	Objectives and scope are absent, contradictory or not linked to the problem.	4 / 5

Project title

Team number

No	Criterion	Excellent 5	Good 4	Satisfactory 3	Limited 2	Weak 1	Score
4	**Proposed approach design and feasibility**	Clear architecture or workflow; key choices, interfaces, resources and risks are justified.	Workable approach; most choices are justified, with minor design or feasibility gaps.	Plausible approach, but detail, justification or the complete system view is limited.	Fragmented approach; major technical choices or feasibility issues remain unresolved.	No workable approach, or the proposal is technically infeasible as described.	4 / 5
5	**Basic working or proof of concept**	Core function works reliably; test evidence or data is shown and behaviour is explained.	Core function works with minor issues; demonstration and evidence are credible.	Partial working, simulation or initial results are shown; integration and testing are limited.	Only isolated components work, or the demonstration is unreliable and weakly evidenced.	Only a concept, mock-up or assembled material is shown; no element functions.	5 / 5
6	**Team understanding progress and next plan**	All members explain the work; ownership, progress and next milestones are clear and realistic.	Most members respond confidently; progress and next milestones have only minor gaps.	Basic team understanding is evident; work allocation or the next plan needs detail.	Understanding is uneven; progress evidence is weak or the next plan is unrealistic.	The team cannot explain its work; contribution, progress and next steps are not evident.	4 / 5

Score summary

1 Problem	2 Gap	3 Objectives	4 Approach	5 Basic working	6 Team and plan	Total	Maximum
5	4	4	4	5	4	26 / 30	30

Evidence checked

☐ Submitted proposal ☐ Literature or market evidence ☐ Architecture or workflow ☐ Basic working demonstration ☐ Test result or data ☐ Updated milestone plan

Decision ☐ Ready to proceed ☐ Proceed with corrections ☐ Re-review required

Review date

Key correction

(1) Interfacing of sensor (load cell) and tension string is not done properly.
(2) More number of sensors can be added.
